

Recombinant Mouse Follistatin/FST Protein (His Tag)(Active)

Catalog No. PKSM040894

	•	4.0
Desc	rin	TIAN
DUSU	TID	

Synonyms AL033346;FS

Species Mouse

Expression_host HEK293 Cells
Sequence Met1-Trp344
Accession P47931
Mol_Mass 36.1 kDa
AP_Mol_Mass 70-80 kDa

Bio activity Measured by its ability to neutralize Activin-mediated inhibition on MPC11 cell

proliferation. The ED50 for this effect is typically 0.02-0.08 µg/mL in the presence

of 10 ng/ml Recombinant Human Activin A.

Properties

Tag

Purity > 98 % as determined by reducing SDS-PAGE.

C-His

Endotoxin < 1.0 EU per μg as determined by the LAL method.

Storage Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to

-80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots

of reconstituted samples are stable at < -20°C for 3 months.

Shipping This product is provided as lyophilized powder which is shipped with ice packs.

Formulation Lyophilized from sterile PBS, pH 7.4

Reconstitution Please refer to the printed manual for detailed information.

Background

Follistatin is a single-chain gonadal protein that specifically inhibits follicle-stimulating hormone release. The single FST gene encodes two isoforms, FST317 and FST344 containing 317 and 344 amino acids respectively, resulting from alternative splicing of the precursor mRNA. In a study in which 37 candidate genes were tested for linkage and association with polycystic ovary syndrome (PCOS) or hyperandrogenemia in 150 families, evidence was found for linkage between PCOS and follistatin. follistatin are expressed and subserve local regulatory roles in numerous extragonadal tissues, including brain, adrenal, bone marrow, and placenta but perhaps most notably in anterior pituitary-the classical target tissue for inhibin, the activin-follistatin system may play a key role in early embryogenesis. Follistatin binds directly to activin and functions as an activin antagonist. Specific inhibitor of the biosynthesis and secretion of pituitary follicle stimulating hormone follistatin is a binding protein to activin. Since activin binds to follistatin, it is imperative to determine the nature of the activin/follistatin binding complex.
