

Recombinant Cynomolgus CD3d/CD3 delta Protein (Fc Tag)

Catalog No. PKSQ050020

•	4.0	
Descri	ntian	ľ
14019		

Synonyms T-cell surface glycoprotein CD3 delta chain; T-cell receptor T3 delta chain; CD3d;

CD3D

SpeciesCynomolgusExpression_hostHuman CellsSequencePhe22-Ala105

 Accession
 Q95LI8

 Mol_Mass
 36.7 kDa

 AP_Mol_Mass
 35 kDa

 Tag
 C-Fc

Properties

Purity > 90 % as determined by reducing SDS-PAGE.

Endotoxin < 1.0 EU per μg as determined by the LAL method.

Storage Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to

-80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots

of reconstituted samples are stable at < -20°C for 3 months.

Shipping This product is provided as lyophilized powder which is shipped with ice packs.

FormulationLyophilized from a 0.2 μm filtered solution of PBS,pH 7.4.ReconstitutionPlease refer to the printed manual for detailed information.

Background

T-cell surface glycoprotein CD3 delta chain (CD3D) is a single-pass type I membrane protein. CD3D, together with CD3-gamma, CD3-epsilon and CD3-zeta, and the T-cell receptor alpha/beta and gamma/delta heterodimers, forms the T cell receptor-CD3 complex. CD3 chains are present as CD3gammaepsilon, deltaepsilon, and zetazeta dimers in the receptor complex and play critical roles in the antigen receptor assembly, transport to the cell surface, and the receptor-mediated signal transduction. T cell receptor-CD3 complex plays an important role in coupling antigen recognition to several intracellular signal-transduction pathways. This complex is critical for T-cell development and function, and represents one of the most complex transmembrane receptors. The T cell receptor-CD3 complex is unique in having ten cytoplasmic immunoreceptor tyrosine-based activation motifs(ITAMs). CD3D contains 1 ITAM domain and has been shown to interact with CD8A.
