

# Recombinant Cynomolgus B7-1/CD80 Protein (His Tag)

Catalog No. PKSQ050029

#### **Description**

Synonyms T-lymphocyte activation antigen CD80; Activation B7-1 antigen; B7; CD80

SpeciesCynomolgusExpression\_hostHuman CellsSequenceVal35-Asn242AccessionG7NXN7Mol\_Mass24.7 kDaAP\_Mol\_Mass35-55 kDaTagC-His

#### **Properties**

Purity > 95 % as determined by reducing SDS-PAGE.
Endotoxin < 1.0 EU per μg as determined by the LAL method.</li>

**Storage** Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to

-80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots

of reconstituted samples are stable at < -20°C for 3 months.

**Shipping** This product is provided as lyophilized powder which is shipped with ice packs.

FormulationLyophilized from a 0.2 μm filtered solution of PBS, pH7.4.ReconstitutionPlease refer to the printed manual for detailed information.

### Background

Cynomologous Cluster of Differentiation 80, also called B7-1, is a member of cell surface immunoglobulin superfamily. It is expressed on the surface of antigen-presenting cells including activated B cells, macrophages and dendritic cells. CD80 plays key, yet distinct roles in the activation of T cells. B7-1/CD80 and B7-2/CD86, together with their receptors CD28 and CTLA4, constitute one of the dominant co-stimulatory pathways that regulate T- and B- cell responses. CD80 is mostly expressed on the surface of antigen-presenting cells including activated B cells, macrophages and dendritic cells. Although both CTLA-4 and CD28 can bind to the same ligands, CTLA-4 binds to B7-1 and B7-2 with a 20-100 fold higher affinity than CD28 and is involved in the down-regulation of the immune response. CD80 is thus regarded as promising therapeutic targets for autoimmune diseases and various carcinomas.
