

## Recombinant Cynomolgus B7-H3/CD276 Protein (His Tag)

Catalog No. PKSQ050052

**Description** 

Synonyms CD276 antigen; CD276; B7 homolog 3; B7-H3;CD276

SpeciesCynomolgusExpression\_hostHuman CellsSequenceLeu29-Glu465AccessionXP\_015308534Mol\_Mass47.9 kDaAP\_Mol\_Mass70-90 kDa

**Properties** 

Tag

**Purity** > 95 % as determined by reducing SDS-PAGE.

C-His

**Endotoxin** < 1.0 EU per μg as determined by the LAL method.

**Storage** Generally, lyophilized proteins are stable for up to 12 months when stored at -20 to

-80°C. Reconstituted protein solution can be stored at 4-8°C for 2-7 days. Aliquots

of reconstituted samples are stable at < -20°C for 3 months.

**Shipping** This product is provided as lyophilized powder which is shipped with ice packs.

Formulation Lyophilized from a 0.2 μm filtered solution of PBS,pH 7.4.
Reconstitution Please refer to the printed manual for detailed information.

## Background

CD276, also known as B7-H3, is a member of the B7 superfamily with signature IgV and IgG regions in extracellular domains. It is a type I transmembrane protein and shares 20–27% amino acid identity with other B7 family members. B7-H3 is involved in the activation of T lymphocytes, and regulates murine bone formation. It is also reported that B7-H3 may play an important role in muscle-immune interactions, providing further evidence of the active role of muscle cells in local immunoregulatory processes. B7-H3 is expressed on T-cells, natural killer cells, and antigen presenting cells, as well as some non-immune cells, such as osteoblasts, fibroblasts, fibroblast-like synoviocytes and epithelial cells. High expression of B7-H3 in tumor vasculature also correlates with poor survival in patients, suggesting that it may play a role in tumor cell migration.
